

Business Intelligence BI

BI is a concept that has been around for many years. Until recently, it has too often been a domain reserved for large corporations with teams of dedicated IT specialists. All too frequently, this has meant developing complex solutions using expensive products on timescales that did not meet business needs. All this has changed with the advent of Power BI, Microsoft business intelligence suite.

Business Intelligence transforms the data of your company in rich visual objects that can collect and organize, allowing you to focus on what really matters.

LOWER COSTS THAN TRADITIONAL SOLUTIONS

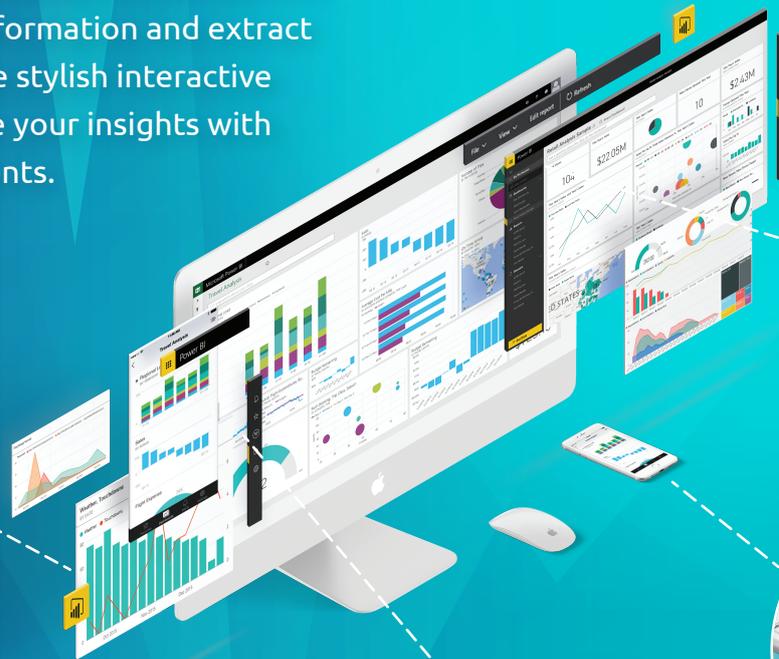

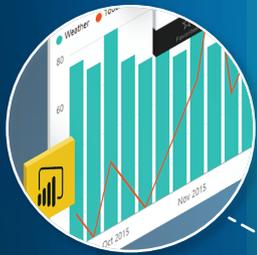

Power BI lets RADventure analyze and present your data and to shape and deliver your results easily and impressively. All this can be achieved in a fraction of the time that it would take to specify, develop, and test a corporate solution. To cap it all off, Power BI allows producing reports at a fraction of the cost of more traditional solutions, with far less rigidity and overhead.

POWERFUL ANALYTICS

Using Power BI, RADventure specialists can discover, structure, and load your data from a wide range of sources; add all the calculations you need to enhance information and extract accurate analysis; create stylish interactive presentations and share your insights with your colleagues and clients.

BEAUTIFUL VISUALIZATIONS

You define which data and how you want it to be displayed: line charts, bar charts, pie charts, stacked bar charts, data grids with rankings, and more.

CUSTOM KPIS

Let RADventure build reporting content focused on the metrics you use to run your business. Create together with high skilled specialists your own unique set of key performance indicators based on data from your current software applications.

KEY FEATURES

- ✔ Lower cost than traditional solutions
- ✔ Accurate, stylish and interactive dashboards
- ✔ Mobile accessibility across multiple devices and browsers
- ✔ Custom KPIs based on the metrics you use to run your business
- ✔ Multiple beautiful visualizations to choose from to display your data

MOBILE PLATFORM

Power BI is totally mobile-friendly platform that allows delivering robust reporting and dashboards to desktops, tablets and mobile phones. Mobile-oriented views of the reports that you see on your desktop can also be accessed using Power BI mobile App.
