

Mobile development

Mobile devices have rapidly become the standard way of interaction, through the ability to access and share information anytime from anywhere. This opens up a range of opportunities to engage the users as never before, and we are available to share our experience and expertise, giving you quality assistance.

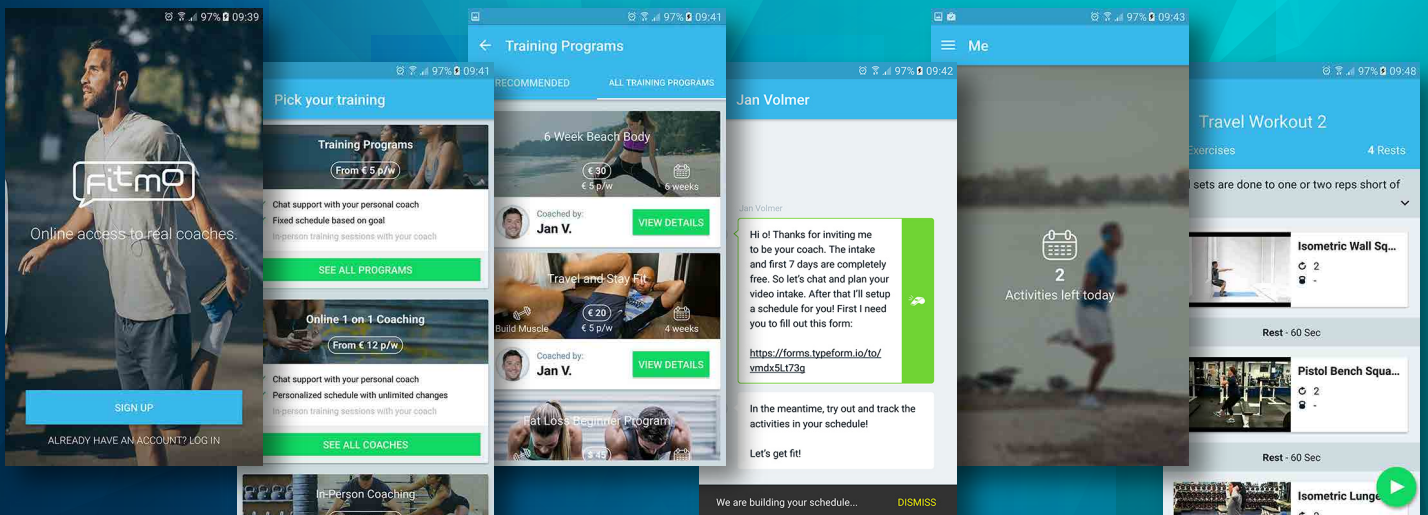

01 CLEVER STRATEGY

We use our resources and work with you to transform an idea into a full mobile strategy, analyzing different options to find the one that perfectly fit to your needs.

02 BEAUTIFUL DESIGN

Our Graphical User Interface designers are experts in applying user interface guidelines of the most common used mobile operating systems (Android, iOS and Windows) to your application.

03 AGILE DEVELOPMENT

We love technology, and are constantly looking for ways to innovate and improve our expertise. We are truly believers that requirements evolve, so we embrace the change using agile methodologies to really fulfill your necessities.

04 QUALITY ORIENTED

We like to feel proud of our work, and the only way to achieve that is delivering work of quality that meet high standards, your standards.

Platforms

We are aware that you need to reduce costs and cover several markets. That's why we deliver native Android, iOS, and Windows apps using Xamarin cross-platform technology, hybrid and progressive Ionic apps and mobile HTML5 responsive websites. The final decision just depends of your choice, and will be guided by our experts.

NATIVE CROSS-PLATFORM APPS

We use Xamarin technology to write native Android, iOS and Windows apps with shared code between them.

- ✔ Xamarin apps leverage platform-specific hardware acceleration and are compiled for native performance, ensuring smooth user experience.
- ✔ Native API access, meaning access to the full spectrum of functionality exposed by the underlying device.
- ✔ This technology guarantees access to all the existing frameworks and libraries through bindings.
- ✔ Using the same language it is possible to share a code base between platforms. This code base is on average 75% thereby reducing development and maintenance costs.
- ✔ The user interfaces are built with standard native controls to ensure they not only look the way users expect, they behave that way too.

HYBRID APPS

We use a powerful HTML5 framework to build native-feeling mobile apps. Ionic allows us to create beautiful apps that run on Android, iOS and Windows sharing 100% of the code. It's even possible to run in the browser as a progressive web app. Built on top of proven technologies like HTML5, AngularJS and Apache Cordova, Ionic is performant, carefully designed and extremely flexible.
