RADventure groep

IS IT POSSIBLE? A PARTNER IN IT?

AT RADVENTURE, WE FIRMLY BELIEVE IT IS!

AND WE SUCCEED IN DOING SO, WORKING TOGETHER WITH YOUR IT PEOPLE.

Your competitive edge is based on your own clever way to run your business. This demands a specific support for your processes from information management. Naturally you can cover standard processes with standard software, but our customers experience on a daily basis the advantages of specific support when it concerns their primary processes. Our strength lies in the co-operation with your own IT people who manage information and adjust your IT-infrastructure to a changing environment. That is how they enable you to develop your business. Exactly to that process, RADventure has something to add.

STATE OF THE ART AND PROVEN TECHNOLOGY

IT-technology changes quickly. RADventure is on top of those changes and continuously adjusts it's development processes accordingly when the technology is ready to use; this is easy for us, since IT is óur primary process. The knowledge and experience with the right tools, is our present to you: RADventure's .NET based software factory is deployed without cost with every application we build.

CLIENT TECHNOLOGIES
Javascript + Tools [grunt, bower, jasmine, protractor]
Angular / Bootstrap / Lodash / Underscore

VERSION CONTROL & CONTINUOUS INTEGRATION
Teamcity / Mercurial / Git / Bitbucket

FUNCTIONAL DESCRIPTIONS IN USE CASES
Agile gebaseerd ontwikkelen met gedelegeerd off shore model

SERVER TECHNOLOGIES
C# / .NET / Owin / Katana / Nancy (web framework)
NHibernate / Castle Windsor
Tools [msbuild, NuGet, NUnit] / Node.js + npm

CONTENT MANAGEMENT AND PROJECT CONTROL
Jira + Confluence
DATABASES
SQL Server / Oracle

MOBILE TECHNOLOGIES
Android/ iOS / Xamarin / Ionic

The capacity and knowledge required to build and maintain your applications, will vary in time; it will depend on your business needs. That is when RADventure will deliver the flexibility you need and make you less dependent on one or more individuals in your organization. It will increase the job satisfaction for your own staff and working with RADventure, they will find their professional peers. All of our services are delivered as if an extension of your own organization.

COST AND QUALITY

Costs are important, of course. That is why RADventure implemented a smart way to use off shore development capabilities. All of our services are delivered from within the Netherlands (including hosting) while software development takes place in Argentina by well trained professionals. Apart from costs and quality, this will be hard for you to notice: the communication arrangements are excellent and response times (because of the time difference) are even shorter than with local development.

You will save even more because you can use our services, only when you need them and you will find that our customized software development can be more cost effective than using standard software that needs to be adjusted. You will not be the first to partner with RADventure: NS, ESA, Reinærdt deuren, Fiat Group, Mercedes Benz and NedTrain have preceded you.

Do you have a specific IT issue you would like to address? Please, get to know our way of working: we will explain personally or we might even provide for a free pilot.
